Normal Forms for Grammars

Normal Forms for Grammars

It is typically easier to work with a context free language if given a CFG in a normal form.

Normal Forms for Grammars

It is typically easier to work with a context free language if given a CFG in a normal form.

Normal Forms

A grammar is in a normal form if its production rules have a special structure:

Normal Forms for Grammars

It is typically easier to work with a context free language if given a CFG in a normal form.

Normal Forms

A grammar is in a normal form if its production rules have a special structure:

- Chomsky Normal Form: Productions are of the form $A \rightarrow BC$ or $A \rightarrow a$

Normal Forms for Grammars

It is typically easier to work with a context free language if given a CFG in a normal form.

Normal Forms

A grammar is in a normal form if its production rules have a special structure:

- Chomsky Normal Form: Productions are of the form $A \rightarrow BC$ or $A \rightarrow a$
- Greibach Normal Form Productions are of the form $A \rightarrow a\alpha$, where $\alpha \in V^*$

Normal Forms for Grammars

It is typically easier to work with a context free language if given a CFG in a normal form.

Normal Forms

A grammar is in a normal form if its production rules have a special structure:

- Chomsky Normal Form: Productions are of the form $A \to BC$ or $A \to a$
- Greibach Normal Form Productions are of the form $A \to a\alpha$, where $\alpha \in V^*$

If ϵ is in the language, we allow the rule $S \to \epsilon$. We will require that S does not appear on the right hand side of any rules.

In this lecture...

- How to convert *any context-free grammar* to an equivalent grammar in the Chomsky Normal Form

In this lecture. . .

- How to convert *any context-free grammar* to an equivalent grammar in the Chomsky Normal Form
- We will start with a series of simplifications...

Eliminating ϵ-productions

- Often would like to ensure that the length of the intermediate strings in a derivation are not longer than the final string derived

Eliminating ϵ-productions

- Often would like to ensure that the length of the intermediate strings in a derivation are not longer than the final string derived
- But a long intermediate string can lead to a short final string if there are ϵ-productions (rules of the form $A \to \epsilon$).

Eliminating ϵ-productions

- Often would like to ensure that the length of the intermediate strings in a derivation are not longer than the final string derived
- But a long intermediate string can lead to a short final string if there are ϵ-productions (rules of the form $A \to \epsilon$).
- Can we rewrite the grammar not to have ϵ-productions?

Eliminating ϵ-production

The Problem

Given a grammar G produce an equivalent grammar G' (i.e., $L(G) = L(G'))$ such that G' has no rules of the form $A \to \epsilon$, except possibly $S \to \epsilon$, and S does not appear on the right hand side of any rule.

Eliminating ϵ-production

The Problem

Given a grammar G produce an equivalent grammar G' (i.e., $L(G) = L(G'))$ such that G' has no rules of the form $A \to \epsilon$, except possibly $S \to \epsilon$, and S does not appear on the right hand side of any rule.

Note: If S can appear on the RHS of a rule, say $S \to SS$, then when there is the rule $S \to \epsilon$, we can again have long intermediate strings yielding short final strings.

Nullable Variables

Definition

A variable A (of grammar G) is nullable if $A \stackrel{*}{\Rightarrow} \epsilon$.

Nullable Variables

Definition

A variable A (of grammar G) is nullable if $A \stackrel{*}{\Rightarrow} \epsilon$.

How do you determine if a variable is nullable?

Nullable Variables

Definition

A variable A (of grammar G) is nullable if $A \stackrel{*}{\Rightarrow} \epsilon$.

How do you determine if a variable is nullable?

- If $A \rightarrow \epsilon$ is a production in G then A is nullable

Nullable Variables

Definition

A variable A (of grammar G) is nullable if $A \stackrel{*}{\Rightarrow} \epsilon$.

How do you determine if a variable is nullable?

- If $A \to \epsilon$ is a production in G then A is nullable
- If $A \to B_1 B_2 \cdots B_k$ is a production and each B_i is nullable, then A is nullable.

Nullable Variables

Definition

A variable A (of grammar G) is nullable if $A \stackrel{*}{\Rightarrow} \epsilon$.

How do you determine if a variable is nullable?

- If $A \rightarrow \epsilon$ is a production in G then A is nullable
- If $A \rightarrow B_1 B_2 \cdots B_k$ is a production and each B_i is nullable, then A is nullable.

Fixed point algorithm: Propagate the label of nullable until there is no change.

Intuition: For every variable A in G have a variable A in G' such that $A \stackrel{*}{\Rightarrow}_{G'} w$ iff $A \stackrel{*}{\Rightarrow}_{G} w$ and $w \neq \epsilon$.

Using nullable variables

Initial Ideas

Intuition: For every variable A in G have a variable A in G' such that $A \stackrel{*}{\Rightarrow}_{G'} w$ iff $A \stackrel{*}{\Rightarrow}_G w$ and $w \neq \epsilon$. For every rule $B \rightarrow CAD$ in G, where A is nullable, add two rules in G':

Intuition: For every variable A in G have a variable A in G' such that $A \stackrel{*}{\Rightarrow}_{G'} w$ iff $A \stackrel{*}{\Rightarrow}_G w$ and $w \neq \epsilon$. For every rule $B \rightarrow CAD$ in G, where A is nullable, add two rules in G': $B \rightarrow CD$ and $B \rightarrow CAD$.

The Algorithm

- G' has same variables, except for a new start symbol S'.

The Algorithm

- G' has same variables, except for a new start symbol S'.
- For each rule $A \to X_1 X_2 \cdots X_k$ in G, create rules $A \to \alpha_1 \alpha_2 \cdots \alpha_k$ where

The Algorithm

- G' has same variables, except for a new start symbol S'.
- For each rule $A \to X_1 X_2 \cdots X_k$ in G, create rules $A \to \alpha_1 \alpha_2 \cdots \alpha_k$ where

$$\alpha_i = \begin{cases} X_i & \text{if } X_i \text{ is a non-nullable variable/terminal in } G \\ X_i \text{ or } \epsilon & \text{if } X_i \text{ is nullable in } G \end{cases}$$

  and not all α_i are ϵ

The Algorithm

- G' has same variables, except for a new start symbol S'.
- For each rule $A \to X_1 X_2 \cdots X_k$ in G, create rules $A \to \alpha_1 \alpha_2 \cdots \alpha_k$ where

  $$\alpha_i = \begin{cases} X_i & \text{if } X_i \text{ is a non-nullable variable/terminal in } G \\ X_i \text{ or } \epsilon & \text{if } X_i \text{ is nullable in } G \end{cases}$$

  and not all α_i are ϵ
- Add rule $S' \to S$. If S nullable in G, add $S' \to \epsilon$ also.

Correctness of the Algorithm

Correctness of the Algorithm

- By construction, there are no rules of the form $A \rightarrow \epsilon$ in G' (except possibly $S' \rightarrow \epsilon$), and S' does not appear in the RHS of any rule.

Correctness of the Algorithm

- By construction, there are no rules of the form $A \to \epsilon$ in G' (except possibly $S' \to \epsilon$), and S' does not appear in the RHS of any rule.
- $L(G) = L(G')$

Correctness of the Algorithm

- By construction, there are no rules of the form $A \rightarrow \epsilon$ in G' (except possibly $S' \rightarrow \epsilon$), and S' does not appear in the RHS of any rule.
- $L(G) = L(G')$
  - $L(G') \subseteq L(G)$: For every rule $A \rightarrow w$ in G', we have $A \stackrel{*}{\Rightarrow}_G w$ (by expanding zero or more nullable variables in w to ϵ)

Correctness of the Algorithm

- By construction, there are no rules of the form $A \to \epsilon$ in G' (except possibly $S' \to \epsilon$), and S' does not appear in the RHS of any rule.
- $L(G) = L(G')$
  - $L(G') \subseteq L(G)$: For every rule $A \to w$ in G', we have $A \stackrel{*}{\Rightarrow}_G w$ (by expanding zero or more nullable variables in w to ϵ)
  - $L(G) \subseteq L(G')$: If $\epsilon \in L(G)$, then $\epsilon \in L(G')$.

Correctness of the Algorithm

- By construction, there are no rules of the form $A \to \epsilon$ in G' (except possibly $S' \to \epsilon$), and S' does not appear in the RHS of any rule.
- $L(G) = L(G')$
  - $L(G') \subseteq L(G)$: For every rule $A \to w$ in G', we have $A \overset{*}{\Rightarrow}_G w$ (by expanding zero or more nullable variables in w to ϵ)
  - $L(G) \subseteq L(G')$: If $\epsilon \in L(G)$, then $\epsilon \in L(G')$. If $A \overset{*}{\Rightarrow}_G w \in \Sigma^+$, then by induction on the number of steps in the derivation, $A \overset{*}{\Rightarrow}_{G'} w$. Base case: if $A \to w \in \Sigma^+$, then $A \to w$.

(Proof details skipped.)

Example

Rules of grammar G be $S \rightarrow AB$; $A \rightarrow AaA|\epsilon$; and $B \rightarrow BbB|\epsilon$.

- Nullables in G are

Eliminating Unit Productions

- Often would like to ensure that the number of steps in a derivation are not much more than the length of the string derived

Eliminating Unit Productions

- Often would like to ensure that the number of steps in a derivation are not much more than the length of the string derived
- But can have a long chain of derivation steps that make little or no "progress," if the grammar has unit productions (rules of the form $A \rightarrow B$, where B is a non-terminal).

Eliminating Unit Productions

- Often would like to ensure that the number of steps in a derivation are not much more than the length of the string derived
- But can have a long chain of derivation steps that make little or no "progress," if the grammar has unit productions (rules of the form $A \to B$, where B is a non-terminal).
  - Note: $A \to a$ is not a unit production

Eliminating Unit Productions

- Often would like to ensure that the number of steps in a derivation are not much more than the length of the string derived
- But can have a long chain of derivation steps that make little or no "progress," if the grammar has unit productions (rules of the form $A \rightarrow B$, where B is a non-terminal).
  - Note: $A \rightarrow a$ is not a unit production
- Can we rewrite the grammar not to have unit-productions?

Eliminating unit-productions

Given a grammar G produce an equivalent grammar G' (i.e., $L(G) = L(G')$) such that G' has no rules of the form $A \rightarrow B$ where $B \in V'$.

Role of Unit Productions

Unit productions can play an important role in designing grammars:

Role of Unit Productions

Unit productions can play an important role in designing grammars:

- While eliminating ϵ-productions we added a rule $S' \rightarrow S$. This is a unit production.

Role of Unit Productions

Unit productions can play an important role in designing grammars:

- While eliminating ϵ-productions we added a rule $S' \rightarrow S$. This is a unit production.
- We have used unit productions in building an unambiguous grammar:

$$
\begin{array}{ll}
I \rightarrow a \mid b \mid Ia \mid Ib & T \rightarrow F \mid T * F \\
N \rightarrow 0 \mid 1 \mid N0 \mid N1 & E \rightarrow T \mid E + T \\
F \rightarrow I \mid N \mid -N \mid (E) &
\end{array}
$$

Role of Unit Productions

Unit productions can play an important role in designing grammars:

- While eliminating ϵ-productions we added a rule $S' \to S$. This is a unit production.
- We have used unit productions in building an unambiguous grammar:

$$\begin{array}{ll} I \to a \mid b \mid Ia \mid Ib & T \to F \mid T * F \\ N \to 0 \mid 1 \mid N0 \mid N1 & E \to T \mid E + T \\ F \to I \mid N \mid -N \mid (E) & \end{array}$$

But as we shall see now, they can be (safely) eliminated

Basic Idea

Introduce new "look-ahead" productions to replace unit productions: look ahead to see where the unit production (or a chain of unit productions) leads to and add a rule to directly go there.

Basic Idea

Introduce new "look-ahead" productions to replace unit productions: look ahead to see where the unit production (or a chain of unit productions) leads to and add a rule to directly go there.

Example

$E \rightarrow T \rightarrow F \rightarrow I \rightarrow a|b|Ia|Ib.$

Basic Idea

Introduce new "look-ahead" productions to replace unit productions: look ahead to see where the unit production (or a chain of unit productions) leads to and add a rule to directly go there.

Example

$E \rightarrow T \rightarrow F \rightarrow I \rightarrow a|b|Ia|Ib$. So introduce new rules
$E \rightarrow a|b|Ia|Ib$

Basic Idea

Introduce new "look-ahead" productions to replace unit productions: look ahead to see where the unit production (or a chain of unit productions) leads to and add a rule to directly go there.

Example

$E \to T \to F \to I \to a|b|Ia|Ib$. So introduce new rules
$E \to a|b|Ia|Ib$

But what if the grammar has cycles of unit productions?

Basic Idea

Introduce new "look-ahead" productions to replace unit productions: look ahead to see where the unit production (or a chain of unit productions) leads to and add a rule to directly go there.

Example

$E \to T \to F \to I \to a|b|Ia|Ib$. So introduce new rules
$E \to a|b|Ia|Ib$

But what if the grammar has cycles of unit productions? For example, $A \to B|a$, $B \to C|b$ and $C \to A|c$. You cannot use the "look-ahead" approach, because then you will get into an infinite loop.

The Algorithm

The Algorithm

1. Determine pairs $\langle A, B\rangle$ such that $A \overset{*}{\Rightarrow}_u B$, i.e., A derives B using only unit rules. Such pairs are called *unit pairs*.

The Algorithm

1. Determine pairs $\langle A, B\rangle$ such that $A \stackrel{*}{\Rightarrow}_u B$, i.e., A derives B using only unit rules. Such pairs are called *unit pairs*.
   - Easy to determine unit pairs:

The Algorithm

1. Determine pairs $\langle A, B \rangle$ such that $A \overset{*}{\Rightarrow}_u B$, i.e., A derives B using only unit rules. Such pairs are called *unit pairs*.
   - Easy to determine unit pairs: Make a directed graph with vertices $= V$, and edges $=$ unit productions. $\langle A, B \rangle$ is a unit pair, if there is a directed path from A to B in the graph.

The Algorithm

1. Determine pairs $\langle A, B \rangle$ such that $A \overset{*}{\Rightarrow}_u B$, i.e., A derives B using only unit rules. Such pairs are called *unit pairs*.
   - Easy to determine unit pairs: Make a directed graph with vertices $= V$, and edges $=$ unit productions. $\langle A, B \rangle$ is a unit pair, if there is a directed path from A to B in the graph.
2. If $\langle A, B \rangle$ is a unit pair, then add production rules $A \rightarrow \beta_1 | \beta_2 | \cdots \beta_k$, where $B \rightarrow \beta_1 | \beta_2 | \cdots | \beta_k$ are *all the non-unit production rules of B*

The Algorithm

1. Determine pairs $\langle A, B\rangle$ such that $A \stackrel{*}{\Rightarrow}_u B$, i.e., A derives B using only unit rules. Such pairs are called *unit pairs*.
   - Easy to determine unit pairs: Make a directed graph with vertices $= V$, and edges $=$ unit productions. $\langle A, B\rangle$ is a unit pair, if there is a directed path from A to B in the graph.
2. If $\langle A, B\rangle$ is a unit pair, then add production rules $A \to \beta_1|\beta_2|\cdots\beta_k$, where $B \to \beta_1|\beta_2|\cdots|\beta_k$ are *all the non-unit production rules of B*
3. Remove all unit production rules.

Let G' be the grammar obtained from G using this algorithm. Then $L(G') = L(G)$

Proof.

Correctness Proof

$L(G') \subseteq L(G)$

Proof.

For every rule $A \rightarrow w$ in G', we have $A \overset{*}{\Rightarrow}_G w$ (by a sequence of zero or more unit productions followed by a nonunit production of G) $\square$

Correctness Proof
$L(G) \subseteq L(G')$

Proof.

For $w \in L(G)$ consider a leftmost derivation $S \overset{*}{\Rightarrow}_{\mathrm{lm}} w$ in G.

Proof.

For $w \in L(G)$ consider a leftmost derivation $S \overset{*}{\Rightarrow}_{\mathrm{lm}} w$ in G.

- All these derivation steps are possible in G' also, except the ones using the unit productions of G.

Correctness Proof
$L(G) \subseteq L(G')$

Proof.

For $w \in L(G)$ consider a leftmost derivation $S \stackrel{*}{\Rightarrow}_{\mathrm{lm}} w$ in G.

- All these derivation steps are possible in G' also, except the ones using the unit productions of G.
- Suppose $S \stackrel{*}{\Rightarrow} xA\alpha \Rightarrow_1 xB\alpha \Rightarrow_2 \cdots$, where $\Rightarrow_1$ corresponds to a unit rule.

Correctness Proof
$L(G) \subseteq L(G')$

Proof.

For $w \in L(G)$ consider a leftmost derivation $S \overset{*}{\Rightarrow}_{\mathrm{lm}} w$ in G.

- All these derivation steps are possible in G' also, except the ones using the unit productions of G.
- Suppose $S \overset{*}{\Rightarrow} xA\alpha \Rightarrow_1 xB\alpha \Rightarrow_2 \cdots$, where $\Rightarrow_1$ corresponds to a unit rule. Then (in a leftmost derivation) $\Rightarrow_2$ must correspond to using a rule for B.

Correctness Proof

$L(G) \subseteq L(G')$

Proof.

For $w \in L(G)$ consider a leftmost derivation $S \overset{*}{\Rightarrow}_{\mathrm{lm}} w$ in G.

- All these derivation steps are possible in G' also, except the ones using the unit productions of G.
- Suppose $S \overset{*}{\Rightarrow} xA\alpha \Rightarrow_1 xB\alpha \Rightarrow_2 \cdots$, where $\Rightarrow_1$ corresponds to a unit rule. Then (in a leftmost derivation) $\Rightarrow_2$ must correspond to using a rule for B.
- So a leftmost derivation of w in G can be broken up into "big-steps" each consisting of zero or more unit productions on the leftmost variable, followed by a non-unit production.

Correctness Proof

$L(G) \subseteq L(G')$

Proof.

For $w \in L(G)$ consider a leftmost derivation $S \overset{*}{\Rightarrow}_{\mathrm{lm}} w$ in G.

- All these derivation steps are possible in G' also, except the ones using the unit productions of G.
- Suppose $S \overset{*}{\Rightarrow} xA\alpha \Rightarrow_1 xB\alpha \Rightarrow_2 \cdots$, where $\Rightarrow_1$ corresponds to a unit rule. Then (in a leftmost derivation) $\Rightarrow_2$ must correspond to using a rule for B.
- So a leftmost derivation of w in G can be broken up into "big-steps" each consisting of zero or more unit productions on the leftmost variable, followed by a non-unit production.
- For each such "big-step" there is a single production rule in G' that yields the same result. □

Eliminating Useless Symbols

Eliminating Useless Symbols

- Ideally one would like to use a compact grammar, with the fewest possible variables

Eliminating Useless Symbols

- Ideally one would like to use a compact grammar, with the fewest possible variables
- But a grammar may have "useless" variables which do not appear in any valid derivation

Eliminating Useless Symbols

- Ideally one would like to use a compact grammar, with the fewest possible variables
- But a grammar may have "useless" variables which do not appear in any valid derivation
- Can we identify all the useless variables and remove them from the grammar? (Note: there may still be other redundancies in the grammar.)

Useless Symbols

Definition

A symbol $X \in V \cup \Sigma$ is *useless* in a grammar $G = (V, \Sigma, S, P)$ if there is no derivation of the form $S \stackrel{*}{\Rightarrow} \alpha X \beta \stackrel{*}{\Rightarrow} w$ where $w \in \Sigma^*$ and $\alpha, \beta \in (V \cup \Sigma)^*$.

Useless Symbols

Definition

A symbol $X \in V \cup \Sigma$ is *useless* in a grammar $G = (V, \Sigma, S, P)$ if there is no derivation of the form $S \stackrel{*}{\Rightarrow} \alpha X \beta \stackrel{*}{\Rightarrow} w$ where $w \in \Sigma^*$ and $\alpha, \beta \in (V \cup \Sigma)^*$.

Removing useless symbols (and rules involving them) from a grammar does not change the language of the grammar

Revisiting Useless Symbols

Recall, X is *useless* if there is no derivation of the form $S \stackrel{*}{\Rightarrow} \alpha X \beta \stackrel{*}{\Rightarrow} w$ where $w \in \Sigma^*$ and $\alpha, \beta \in (V \cup \Sigma)^*$.

Revisiting Useless Symbols

Recall, X is *useless* if there is no derivation of the form $S \overset{*}{\Rightarrow} \alpha X \beta \overset{*}{\Rightarrow} w$ where $w \in \Sigma^*$ and $\alpha, \beta \in (V \cup \Sigma)^*$.

i.e., X is useless iff either

Revisiting Useless Symbols

Recall, X is *useless* if there is no derivation of the form $S \overset{*}{\Rightarrow} \alpha X \beta \overset{*}{\Rightarrow} w$ where $w \in \Sigma^*$ and $\alpha, \beta \in (V \cup \Sigma)^*$.

i.e., X is useless iff either

Type 1: X is not "reachable" from S (i.e., no α, β such that $S \overset{*}{\Rightarrow} \alpha X \beta$),

Revisiting Useless Symbols

Recall, X is *useless* if there is no derivation of the form $S \stackrel{*}{\Rightarrow} \alpha X \beta \stackrel{*}{\Rightarrow} w$ where $w \in \Sigma^*$ and $\alpha, \beta \in (V \cup \Sigma)^*$.

i.e., X is useless iff either

Type 1: X is not "reachable" from S (i.e., no α, β such that $S \stackrel{*}{\Rightarrow} \alpha X \beta$), or

Type 2: for all α, β such that $S \stackrel{*}{\Rightarrow} \alpha X \beta$, either α, X or β cannot yield a string in Σ^*.

Revisiting Useless Symbols

Recall, X is *useless* if there is no derivation of the form $S \stackrel{*}{\Rightarrow} \alpha X \beta \stackrel{*}{\Rightarrow} w$ where $w \in \Sigma^*$ and $\alpha, \beta \in (V \cup \Sigma)^*$.

i.e., X is useless iff either

- Type 1: X is not "reachable" from S (i.e., no α, β such that $S \stackrel{*}{\Rightarrow} \alpha X \beta$), or
- Type 2: for all α, β such that $S \stackrel{*}{\Rightarrow} \alpha X \beta$, either α, X or β cannot yield a string in Σ^*. i.e., either
  - Type 2a: X is not "generating" (i.e., no $w \in \Sigma^*$ such that $X \stackrel{*}{\Rightarrow} w$),

Revisiting Useless Symbols

Recall, X is *useless* if there is no derivation of the form $S \overset{*}{\Rightarrow} \alpha X \beta \overset{*}{\Rightarrow} w$ where $w \in \Sigma^*$ and $\alpha, \beta \in (V \cup \Sigma)^*$.

i.e., X is useless iff either

- Type 1: X is not "reachable" from S (i.e., no α, β such that $S \overset{*}{\Rightarrow} \alpha X \beta$), or
- Type 2: for all α, β such that $S \overset{*}{\Rightarrow} \alpha X \beta$, either α, X or β cannot yield a string in Σ^*. i.e., either
  - Type 2a: X is not "generating" (i.e., no $w \in \Sigma^*$ such that $X \overset{*}{\Rightarrow} w$), or
  - Type 2b: α or β contains a non-generating symbol

Algorithm to Remove Useless Symbols

Algorithm

So, in order to remove useless symbols,

Algorithm to Remove Useless Symbols

Algorithm

So, in order to remove useless symbols,

1. First remove all symbols that are not generating (Type 2a)

Algorithm to Remove Useless Symbols

Algorithm

So, in order to remove useless symbols,

1. First remove all symbols that are not generating (Type 2a)
    - If X was useless, but reachable and generating (i.e., Type 2b) then X becomes unreachable after this step

Algorithm to Remove Useless Symbols

Algorithm

So, in order to remove useless symbols,

1. First remove all symbols that are not generating (Type 2a)
   - If X was useless, but reachable and generating (i.e., Type 2b) then X becomes unreachable after this step
     - Type 2b: for all α, β such that $S \stackrel{*}{\Rightarrow} \alpha X \beta$, α or β contains a non-generating symbol.

Algorithm to Remove Useless Symbols

Algorithm

So, in order to remove useless symbols,

1. First remove all symbols that are not generating (Type 2a)
    - If X was useless, but reachable and generating (i.e., Type 2b) then X becomes unreachable after this step
        - Type 2b: for all α, β such that $S \stackrel{*}{\Rightarrow} \alpha X \beta$, α or β contains a non-generating symbol. Then in the new grammar all such derivations disappear (because some variable in α or β is removed).

Algorithm to Remove Useless Symbols

Algorithm

So, in order to remove useless symbols,

1. First remove all symbols that are not generating (Type 2a)
   - If X was useless, but reachable and generating (i.e., Type 2b) then X becomes unreachable after this step
     - Type 2b: for all α, β such that $S \stackrel{*}{\Rightarrow} \alpha X \beta$, α or β contains a non-generating symbol. Then in the new grammar all such derivations disappear (because some variable in α or β is removed).
2. Next remove all unreachable symbols in the new grammar.

Algorithm to Remove Useless Symbols

Algorithm

So, in order to remove useless symbols,

1. First remove all symbols that are not generating (Type 2a)
   - If X was useless, but reachable and generating (i.e., Type 2b) then X becomes unreachable after this step
     - Type 2b: for all α, β such that $S \overset{*}{\Rightarrow} \alpha X \beta$, α or β contains a non-generating symbol. Then in the new grammar all such derivations disappear (because some variable in α or β is removed).
2. Next remove all unreachable symbols in the new grammar.
   - Removes Type 1 (originally unreachable) and Type 2b useless symbols now

Algorithm to Remove Useless Symbols

Algorithm

So, in order to remove useless symbols,

1. First remove all symbols that are not generating (Type 2a)
   - If X was useless, but reachable and generating (i.e., Type 2b) then X becomes unreachable after this step
     - Type 2b: for all α, β such that $S \stackrel{*}{\Rightarrow} \alpha X \beta$, α or β contains a non-generating symbol. Then in the new grammar all such derivations disappear (because some variable in α or β is removed).
2. Next remove all unreachable symbols in the new grammar.
   - Removes Type 1 (originally unreachable) and Type 2b useless symbols now

Doesn't remove any useful symbol in either step (Why?)

Algorithm to Remove Useless Symbols

Algorithm

So, in order to remove useless symbols,

1. First remove all symbols that are not generating (Type 2a)
    - If X was useless, but reachable and generating (i.e., Type 2b) then X becomes unreachable after this step
        - Type 2b: for all α, β such that $S \stackrel{*}{\Rightarrow} \alpha X \beta$, α or β contains a non-generating symbol. Then in the new grammar all such derivations disappear (because some variable in α or β is removed).
2. Next remove all unreachable symbols in the new grammar.
    - Removes Type 1 (originally unreachable) and Type 2b useless symbols now

Doesn't remove any useful symbol in either step (Why?)
Only remains to show how to do the two steps in this algorithm

Generating and Reachable Symbols

Generating symbols

Generating and Reachable Symbols

Generating symbols

- If $A \to x$, where $x \in \Sigma^*$, is a production then A is generating

Generating and Reachable Symbols

Generating symbols

- If $A \rightarrow x$, where $x \in \Sigma^*$, is a production then A is generating
- If $A \rightarrow \gamma$ is a production and all variables in γ are generating, then A is generating.

Generating and Reachable Symbols

Generating symbols

- If $A \rightarrow x$, where $x \in \Sigma^*$, is a production then A is generating
- If $A \rightarrow \gamma$ is a production and all variables in γ are generating, then A is generating.

Reachable symbols

Generating and Reachable Symbols

Generating symbols

- If $A \rightarrow x$, where $x \in \Sigma^*$, is a production then A is generating
- If $A \rightarrow \gamma$ is a production and all variables in γ are generating, then A is generating.

Reachable symbols

- S is reachable

Generating and Reachable Symbols

Generating symbols

- If $A \to x$, where $x \in \Sigma^*$, is a production then A is generating
- If $A \to \gamma$ is a production and all variables in γ are generating, then A is generating.

Reachable symbols

- S is reachable
- If A is reachable and $A \to \alpha B \beta$ is a production, then B is reachable

Generating and Reachable Symbols

Generating symbols

- If $A \to x$, where $x \in \Sigma^*$, is a production then A is generating
- If $A \to \gamma$ is a production and all variables in γ are generating, then A is generating.

Reachable symbols

- S is reachable
- If A is reachable and $A \to \alpha B \beta$ is a production, then B is reachable

Fixed point algorithm: Propagate the label (generating or reachable) until no change.

The Three Simplifications, Together

The Three Simplifications, Together

Given a grammar G, such that $L(G) \neq \emptyset$, we can find a grammar G' such that $L(G') = L(G)$ and G' has no ϵ-productions (except possibly $S \to \epsilon$), unit productions, or useless symbols, and S does not appear in the RHS of any rule.

The Three Simplifications, Together

Given a grammar G, such that $L(G) \neq \emptyset$, we can find a grammar G' such that $L(G') = L(G)$ and G' has no ϵ-productions (except possibly $S \to \epsilon$), unit productions, or useless symbols, and S does not appear in the RHS of any rule.

Proof.

Apply the following 3 steps in order:

1. Eliminate ϵ-productions
2. Eliminate unit productions
3. Eliminate useless symbols. $\square$

The Three Simplifications, Together

Given a grammar G, such that $L(G) \neq \emptyset$, we can find a grammar G' such that $L(G') = L(G)$ and G' has no ϵ-productions (except possibly $S \to \epsilon$), unit productions, or useless symbols, and S does not appear in the RHS of any rule.

Proof.

Apply the following 3 steps in order:

1. Eliminate ϵ-productions
2. Eliminate unit productions
3. Eliminate useless symbols. □

Note: Applying the steps in a different order may result in a grammar not having all the desired properties.

Chomsky Normal Form

Chomsky Normal Form

Proposition

For any non-empty context-free language L, there is a grammar G, such that $L(G) = L$ and each rule in G is of the form

1. $A \rightarrow a$ *where* $a \in \Sigma$,

Chomsky Normal Form

Proposition

For any non-empty context-free language L, there is a grammar G, such that $L(G) = L$ and each rule in G is of the form

1. $A \to a$ *where* $a \in \Sigma$, *or*
2. $A \to BC$ *where neither* B *nor* C *is the start symbol,*

Chomsky Normal Form

Proposition

For any non-empty context-free language L, there is a grammar G, such that $L(G) = L$ and each rule in G is of the form

1. $A \rightarrow a$ *where* $a \in \Sigma$, *or*
2. $A \rightarrow BC$ *where neither* B *nor* C *is the start symbol, or*
3. $S \rightarrow \epsilon$ *where* S *is the start symbol (iff* $\epsilon \in L$*)*

Chomsky Normal Form

Proposition

For any non-empty context-free language L, there is a grammar G, such that $L(G) = L$ and each rule in G is of the form

1. $A \to a$ *where* $a \in \Sigma$, *or*
2. $A \to BC$ *where neither* B *nor* C *is the start symbol, or*
3. $S \to \epsilon$ *where* S *is the start symbol (iff* $\epsilon \in L$*)*

Furthermore, G *has no useless symbols.*

Outline of Normalization

Given $G = (V, \Sigma, S, P)$, convert to CNF

- Let $G' = (V', \Sigma, S, P')$ be the grammar obtained after eliminating ϵ-productions, unit productions, and useless symbols from G.

Outline of Normalization

Given $G = (V, \Sigma, S, P)$, convert to CNF

- Let $G' = (V', \Sigma, S, P')$ be the grammar obtained after eliminating ϵ-productions, unit productions, and useless symbols from G.
- If $A \to x$ is a rule of G', where $|x| = 0$, then A must be S (because G' has no other ϵ-productions). If $A \to x$ is a rule of G', where $|x| = 1$, then $x \in \Sigma$ (because G' has no unit productions). In either case $A \to x$ is in a valid form.

Outline of Normalization

Given $G = (V, \Sigma, S, P)$, convert to CNF

- Let $G' = (V', \Sigma, S, P')$ be the grammar obtained after eliminating ϵ-productions, unit productions, and useless symbols from G.
- If $A \to x$ is a rule of G', where $|x| = 0$, then A must be S (because G' has no other ϵ-productions). If $A \to x$ is a rule of G', where $|x| = 1$, then $x \in \Sigma$ (because G' has no unit productions). In either case $A \to x$ is in a valid form.
- All remaining productions are of form $A \to X_1 X_2 \cdots X_n$ where $X_i \in V' \cup \Sigma$, $n \geq 2$ (and S does not occur in the RHS).

Outline of Normalization

Given $G = (V, \Sigma, S, P)$, convert to CNF

- Let $G' = (V', \Sigma, S, P')$ be the grammar obtained after eliminating ϵ-productions, unit productions, and useless symbols from G.
- If $A \to x$ is a rule of G', where $|x| = 0$, then A must be S (because G' has no other ϵ-productions). If $A \to x$ is a rule of G', where $|x| = 1$, then $x \in \Sigma$ (because G' has no unit productions). In either case $A \to x$ is in a valid form.
- All remaining productions are of form $A \to X_1 X_2 \cdots X_n$ where $X_i \in V' \cup \Sigma$, $n \geq 2$ (and S does not occur in the RHS). We will put these rules in the right form by applying the following two transformations:
  1. Make the RHS consist only of variables
  2. Make the RHS be of length 2.

Make the RHS consist only of variables

Let $A \to X_1 X_2 \cdots X_n$, with X_i being either a variable or a terminal. We want rules where all the X_i are variables.

Make the RHS consist only of variables

Let $A \to X_1 X_2 \cdots X_n$, with X_i being either a variable or a terminal. We want rules where all the X_i are variables.

Example

Consider $A \to BbCdefG$. How do you remove the terminals?

Make the RHS consist only of variables

Let $A \to X_1 X_2 \cdots X_n$, with X_i being either a variable or a terminal. We want rules where all the X_i are variables.

Example

Consider $A \to BbCdefG$. How do you remove the terminals? For each $a, b, c \ldots \in \Sigma$ add variables $X_a, X_b, X_c, \ldots$ with productions $X_a \to a$, $X_b \to b$, ... Then replace the production $A \to BbCdefG$ by $A \to BX_bCX_dX_eX_fG$

Make the RHS consist only of variables

Let $A \to X_1 X_2 \cdots X_n$, with X_i being either a variable or a terminal. We want rules where all the X_i are variables.

Example

Consider $A \to BbCdefG$. How do you remove the terminals? For each $a, b, c \ldots \in \Sigma$ add variables $X_a, X_b, X_c, \ldots$ with productions $X_a \to a$, $X_b \to b$, $\ldots$. Then replace the production $A \to BbCdefG$ by $A \to BX_bCX_dX_eX_fG$

For every $a \in \Sigma$

1. Add a new variable X_a
2. In every rule, if a occurs in the RHS, replace it by X_a
3. Add a new rule $X_a \to a$

Make the RHS be of length 2

- Now all productions are of the form $A \to a$ or $A \to B_1 B_2 \cdots B_n$, where $n \geq 2$ and each B_i is a variable.

Make the RHS be of length 2

- Now all productions are of the form $A \to a$ or $A \to B_1 B_2 \cdots B_n$, where $n \geq 2$ and each B_i is a variable.
- How do you eliminate rules of the form $A \to B_1 B_2 \ldots B_n$ where $n > 2$?

Make the RHS be of length 2

- Now all productions are of the form $A \to a$ or $A \to B_1 B_2 \cdots B_n$, where $n \geq 2$ and each B_i is a variable.
- How do you eliminate rules of the form $A \to B_1 B_2 \ldots B_n$ where $n > 2$?
- Replace the rule by the following set of rules

$$\begin{array}{rcl} A & \to & B_1 B_{(2,n)} \\ B_{(2,n)} & \to & B_2 B_{(3,n)} \\ B_{(3,n)} & \to & B_3 B_{(4,n)} \\ & \vdots & \\ B_{(n-1,n)} & \to & B_{n-1} B_n \end{array}$$

where $B_{(i,n)}$ are "new" variables.

An Example

Example

Convert: $S \rightarrow aA|bB|b$, $A \rightarrow Baa|ba$, $B \rightarrow bAAb|ab$, into Chomsky Normal Form.

An Example

Example

Convert: $S \to aA|bB|b$, $A \to Baa|ba$, $B \to bAAb|ab$, into Chomsky Normal Form.

1. Eliminate ϵ-productions, unit productions, and useless symbols.

An Example

Example

Convert: $S \to aA|bB|b$, $A \to Baa|ba$, $B \to bAAb|ab$, into Chomsky Normal Form.

1. Eliminate ϵ-productions, unit productions, and useless symbols. This grammar is already in the right form.

An Example

Example

Convert: $S \rightarrow aA|bB|b$, $A \rightarrow Baa|ba$, $B \rightarrow bAAb|ab$, into Chomsky Normal Form.

1. Eliminate ϵ-productions, unit productions, and useless symbols. This grammar is already in the right form.
2. Remove terminals from the RHS of long rules.

An Example

Example

Convert: $S \rightarrow aA|bB|b$, $A \rightarrow Baa|ba$, $B \rightarrow bAAb|ab$, into Chomsky Normal Form.

1. Eliminate ϵ-productions, unit productions, and useless symbols. This grammar is already in the right form.
2. Remove terminals from the RHS of long rules. New grammar is: $X_a \rightarrow a$, $X_b \rightarrow b$, $S \rightarrow X_aA|X_bB|b$, $A \rightarrow BX_aX_a|X_bX_a$, and $B \rightarrow X_bAAX_b|X_aX_b$

An Example

Example

Convert: $S \to aA|bB|b$, $A \to Baa|ba$, $B \to bAAb|ab$, into Chomsky Normal Form.

1. Eliminate ϵ-productions, unit productions, and useless symbols. This grammar is already in the right form.
2. Remove terminals from the RHS of long rules. New grammar is: $X_a \to a$, $X_b \to b$, $S \to X_aA|X_bB|b$, $A \to BX_aX_a|X_bX_a$, and $B \to X_bAAX_b|X_aX_b$
3. Reduce the RHS of rules to be of length at most two.

An Example

Example

Convert: $S \to aA|bB|b$, $A \to Baa|ba$, $B \to bAAb|ab$, into Chomsky Normal Form.

1. Eliminate ϵ-productions, unit productions, and useless symbols. This grammar is already in the right form.
2. Remove terminals from the RHS of long rules. New grammar is: $X_a \to a$, $X_b \to b$, $S \to X_aA|X_bB|b$, $A \to BX_aX_a|X_bX_a$, and $B \to X_bAAX_b|X_aX_b$
3. Reduce the RHS of rules to be of length at most two. New grammar replaces $A \to BX_aX_a$ by rules $A \to BX_{aa}$, $X_{aa} \to X_aX_a$, and $B \to X_bAAX_b$ by rules $B \to X_bX_{AAb}$, $X_{AAb} \to AX_{Ab}$, $X_{Ab} \to AX_b$
